

ESTILAD® VG-TIGHTENING

Estilad VG-TIGHTENING Gel is for women who want to confidently care for their vagina and improve the sensation of sexual relations.

Over time, natural processes within a woman's lifecycle, such as childbirth and the hormonal changes that accompany aging, can cause physiological changes leading to various health conditions such as involuntary urine leakage, vaginal laxity, vaginal dryness and recurring infections. These symptoms can negatively affect women's quality of life and often prevent them from carrying out a normal lifestyle.

Estilad VG-Tightening Gel is formulated with Manjakani Extract, one of the most powerful astringents available. Its incredible astringency allows it to aid in many vaginal disorders and adverse conditions including tightening the vagina, restoring vaginal elasticity, healing vaginal tissue, improving vaginal vitality, reducing vaginal discharge, preventing and reversing vaginal atrophy, and healing genital prolapse.

Manjakani Extract natural astringent properties help restore health, tone and vigour to the vagina. It firms and tightens the muscles of the vaginal wall, improving both muscular tone and elasticity while also reducing that annoying vaginal discharge that can cause bad odour.

Aloe vera provides softness and elasticity and Hamamelis Extract has a soothing effect on the skin.

Estilad VG-Tightening is completely safe to use. Performing sexual intercourse with a condom, won't irritate the skin. It spreads easily with no mess and it does not contain harmful ingredients or additives.

ESTILAD® VG-TIGHTENING is a cosmetic gel formulated to help improve:

- Vaginal laxity
- Vaginal dryness
- Vaginal leakage

CHARACTERISTICS
