

ESTILAD® VG Whitening

Genital hyperpigmentation is the darkening of the skin around the external genitalia and anal area. It can be caused by age, hormonal problems, pregnancy or personal predisposition to excessive skin pigmentation.

Estilad VG Whitening is an ideal formulation to combat this problem due to its strong depigmenting capacity, thanks to its formulation that both interrupts the pigment production process and detoxifies the skin, including:

Tranexamic acid is a potent plasmin inhibitor, controlling pigmentation by inhibiting the release of inflammatory mediators involved in triggering melanogenesis.

Kojic acid is a natural metabolite that lightens the skin by preventing the production of tyrosine, the amino acid responsible for producing melanin. It also works as an antioxidant

Phytexcell Liquorice® is a potent antioxidant that evens skin tone, lightening and brightening the skin.

Routine and **Glutathione**, provide a powerful antioxidant and whitening effect that even skin tone, lighten and brighten the vagina contour skin.

Ideal for treating any type of hormonal spots.

Estilad VG Whitening helps to achieve a progressive lightening of the skin around the vulva, effectively and safely combatting discolouration.

Estilad VG® Whitening helps to achieve a progressive lightening of skin around the vulva, effectively and safely combatting discolouration.

CHARACTERISTICS

PRESENTATION

5 vials x 5 ml

INGREDIENTS

Aqua, Glycerin, Kojic Acid, Sodium Hyaluronate, Tranexamic Acid, Butylene Glycol, Glutathione, Glycyrrhiza Glabra (Liquorice) Root Extract, Troxerutin.
